

ALWAYS ON FOR HEALTHCARE

CONTINUOUS AVAILABILITY to improve patient care and maximize administrative efficiency

Healthcare providers depend more than ever on digital technologies to ensure accountability of care and efficient management of patient records. Availability of critical systems such as Electronic Health Records (EHR), Hospital Information Systems (HIS), Picture Archiving and Communications Systems (PACS), and other clinical and administrative applications is paramount. No organization can afford anything less than always on when lives are at stake.

That's why healthcare providers, from small community hospitals to large integrated delivery networks (IDNs), trust their critical applications to Stratus.

Stratus keeps clinical and administrative applications up and running all the time. We offer a range of flexible always-on solutions that are easy to deploy and manage, and backed by a support structure with a 30-year track record of success.

Our solutions can be rapidly deployed in your chosen environment — physical, virtualized or cloud — without any changes to your applications.

Key Benefits

- Ensure secure on-demand access to patient records and critical data exchange throughout practices, clinics and hospitals
- Prevent the loss of clinical administrative and financial data due to technology lapses or server outages
- Detect potential problems and proactively take action before downtime becomes an issue
- Scale easily to accommodate changing business requirements
- Meet compliance requirements for data integrity and reliability

“We’ve been using Stratus everRun HA high availability solution for physical servers since 2006 and have not had any downtime since then. This made it an easy decision to also use a Stratus product to protect our virtual servers.”
